

Azu Freemium License

1. Public Release Summary

Azu uses a freemium release model so people can begin learning and using the script while fuller tools, commercial use, institutional support, and production paths can be handled through separate Azu terms.

2. Free Public Use

Public materials may be used to learn, test, type, view, and evaluate Azu for personal and educational purposes. Public access does not include private source files, private repositories, partner tools, hosted services, or future unreleased work.

3. Commercial And Institutional Use

Commercial, institutional, production, redistribution, integration, partner, hosted, or managed-support uses may require a separate Azu license, plan, or written approval.

4. No Ownership Transfer

Access to a public Azu file, preview, font, keyboard, page, or download does not transfer ownership of Azu intellectual property, source files, trademarks, accounts, services, platforms, or business assets. Rights not expressly granted are reserved.

5. Azu Brand Reserved

The Azu name, logo, website, public release identity, hosted services, and partner programs remain controlled by Azu. Do not present modified files, separate products, or outside services as official Azu releases without written permission.

6. Original Zu Attribution

Zu was developed by Professor Mpele Mvutu. Azu is a digital expansion and practical software ecosystem around that script.

7. No Warranty

Public Azu materials are provided for review and use as available. Azu does not promise that public materials are error-free, complete, suitable for every purpose, or compatible with every device, app, or workflow.

8. Separate Agreements

Special access, source files, commercial rights, partner workflows, institutional support, and initial work-specific rights may be handled through separate written agreements.
